

THE STATE OF THE
WORLD'S MIDWIFERY

2014

**A UNIVERSAL
PATHWAY.
A WOMAN'S RIGHT
TO HEALTH**

REPRODUCTIVE HEALTH

PREGNANCY

CHILDBIRTH

POSTNATAL

Executive Summary

The State of the World's Midwifery (SoWMy) 2014: A Universal Pathway. A Woman's Right to Health takes its inspiration from the United Nations Secretary-General's *Every Woman Every Child* initiative and his call to action in September 2013 to do everything possible to achieve the Millennium Development Goals (MDGs) by 2015 and work towards the development and adoption of a post-2015 agenda based on the principle of universality.

SoWMy 2014's main objective, agreed at the 2nd Global Midwifery Symposium held in Kuala Lumpur in May 2013, is to provide an evidence base on the state of the world's midwifery in 2014 that will: support policy dialogue between governments and their partners; accelerate progress on the health MDGs; identify developments in the three years since the *SoWMy 2011* report was published; and inform negotiations for and preparation of the post-2015 development agenda.

SoWMy 2014 focuses on 73 of the 75 low- and middle-income countries that are included in the "Countdown to 2015" reports. More than 92% of all the world's maternal and newborn deaths and stillbirths occur within these 73 countries. However, only 42% of the world's medical, midwifery and nursing personnel are available to women and newborn infants (hereafter 'newborns') in these countries.

Midwifery is a key element of sexual, reproductive, maternal and newborn health (SRMNH) care and is defined in this report as: the health services and health workforce needed to support and care for women and newborns, including sexual and reproductive health and especially preg-

nancy, labour and postnatal care. This enables analysis of the diverse ways in which midwifery is delivered by a range of health-care professionals and associate professionals.

SoWMy 2014 has been co-ordinated by the United Nations Population Fund, the International Confederation of Midwives and the World Health Organization on behalf of government representatives and national stakeholders in the 73 countries and 30 global development partners.

Tangible progress has been made in improving midwifery in many countries since the *SoWMy 2011* report: 33 of the 73 countries (45%) report vigorous attempts to improve workforce retention in remote areas; 20 countries (28%) have started to increase recruitment and deployment of midwives; 13 countries (18%) have prepared plans to establish regulatory bodies; and 14 (20%) have a new code of practice and/or regulatory framework. Perhaps the most impressive collective step forward is the improvement in workforce data, information and accountability, reported by 52 countries (71%).

The evidence and analysis in *SoWMy 2014* is structured by the four domains that determine

Midwifery is a key element of sexual, reproductive, maternal and newborn health (SRMNH) care

(Jhpiego/Kate Holt)

whether a health system and its health workforce are providing effective coverage, i.e. whether women are obtaining the care they want and need in relation to SRMNH services. These four domains are: availability, accessibility, acceptability and quality.

Availability: *SoWMy 2014* provides new estimates of the essential SRMNH services needed by women and newborns. This need for services, in each country, can be converted into the need for the midwifery workforce.

Midwives, when educated and regulated to international standards, have the competencies to deliver 87% of this service need. However, midwives make up only 36% of the reported midwifery workforce: not all countries have a dedicated professional cadre focused on supporting women and newborns. Instead there is diversity in the typologies, roles and composition of health workers contributing to midwifery services, and many of these workers spend less than 100% of their time on SRMNH services.

The new evidence on diversity presented in *SoWMy 2014* can inform policy and planning.

Firstly, the availability of the midwifery workforce and the roles they perform cannot be deduced from job titles. Secondly, the full-time equivalent midwifery workforce represents less than two thirds of all workers spending time on SRMNH services. Therefore, any analysis comparing or correlating the midwifery workforce with SRMNH outputs/outcomes should take full-time equivalent staffing as the measure of availability.

The evidence identifies opportunities to: align job titles, roles and responsibilities; strengthen linkages between education and employment; improve efficiency; and assess and reduce high levels of turnover and attrition. In particular, progress is required on the identity, status and salaries of midwives, removing gender discrimination and addressing the lack of political attention to issues which only affect women.

Accessibility: Although nearly all of the 73 countries recognize the importance of financial accessibility and have a policy of offering at least some essential elements of SRMNH care free of charge at the point of access, only 4 provide a national “minimum guaranteed benefits package” for SRMNH that includes all the essential interventions.

Gaps in the essential interventions include those known to reduce the four leading causes of maternal mortality: severe bleeding; infections; high blood pressure during pregnancy (pre-eclampsia and eclampsia); and unsafe abortion.

Lack of geographical data on health facilities and midwifery workers precludes reliable assessment of whether all women have access to a health worker when needed. Improving accessibility requires making all urban and rural areas attractive to health workers, and ensuring that all barriers to care, including lack of transportation, essential medicines and health-care workers, are removed.

Acceptability: Most countries have policies in place to deliver SRMNH care in ways that are

sensitive to social and cultural needs. However, data on women's perceptions of midwifery care are scarce, and countries acknowledge the need for more robust research on this topic. Contributors to the SoWMy 2014 workshops noted that the issue of acceptability is strongly linked to discrimination and the status of women generally, both as service users and health workers.

Quality of both care and care providers can be increased by improving the quality of midwifery education, regulation and the role of professional associations. *SoWMy 2014* indicates that although the curricula in most countries are appropriate and up-to-date, pervasive gaps remain in education infrastructure, resources and systems, particularly for direct-entry midwifery programmes.

Nearly all of the 73 countries have a regulatory infrastructure for midwifery, with prescribed standards for midwifery education, including in the private sector. Quality of care would be further strengthened by licensing/re-licensing systems that require the midwifery workforce to demonstrate continuing professional development.

The ultimate goal of professional associations is to foster a dynamic, collaborative, fit-for-purpose, practice-ready team of health-care professionals who are responsive to the needs of women and children. Although almost all countries have at least one professional association for midwives, nurse-midwives or auxiliary midwives, their role in quality improvement could be strengthened if they were enabled to contribute to policy discussions and key decisions affecting midwifery services.

There are substantial gaps in effective coverage in both the availability and quality dimensions. Reducing these gaps requires the collection and better use of workforce data and leadership to prioritize midwifery and release resources to support workforce and service planning. The minimum 10 data elements required for health workforce planning are: headcount, percentage time spent on SRMNH, roles, age distribution, retirement age, length of education, enrolments into, attrition and graduation from education, and voluntary attrition from the workforce.

Not all countries have a dedicated professional cadre focused on supporting women and newborns. (*Mamaye/Sierra Leone*)

The report shows that:

1 The 73 Countdown countries included in the report account for more than **92% OF GLOBAL MATERNAL AND NEWBORN DEATHS AND STILLBIRTHS** but have only **42% OF THE WORLD'S MEDICAL, MIDWIFERY AND NURSING PERSONNEL**.

Within these countries, workforce deficits are often most acute in areas where maternal and newborn mortality rates are highest.

2 **ONLY 4 OF THE 73 COUNTRIES** have a midwifery workforce that is able to meet the universal need for the 46 essential interventions for sexual, reproductive, maternal and newborn health.

3 Countries are endeavouring to expand and deliver equitable midwifery services, but **COMPREHENSIVE, DISAGGREGATED DATA** for determining the availability, accessibility, acceptability and quality of the midwifery workforce **ARE NOT AVAILABLE**.

4 Midwives who are educated and regulated to international standards can provide **87% OF THE ESSENTIAL CARE** needed for women and newborns.

5 In order for midwives to work effectively, **FACILITIES NEED TO BE EQUIPPED TO OFFER THE APPROPRIATE SERVICES**, including for emergencies (safe blood, caesarean sections, newborn resuscitation).

6 Accurate data on the midwifery workforce enable countries to plan effectively. This requires **A MINIMUM OF 10 PIECES OF INFORMATION THAT ALL COUNTRIES SHOULD COLLECT**: headcount, percentage time spent on SRMNH, roles, age distribution, retirement age, length of education, enrolments into, attrition and graduation from education, and voluntary attrition from the workforce.

7 Legislation, regulation and licensing of midwifery allow midwives to provide the high-quality care they are educated to deliver and thus protects women's health. High-quality midwifery care for women and newborns saves lives and

CONTRIBUTES TO HEALTHY FAMILIES AND MORE PRODUCTIVE COMMUNITIES.

8 The returns on investment are a "best buy":

- Investing in midwifery education, with deployment to community-based services, could yield a **16-FOLD RETURN ON INVESTMENT** in terms of lives saved and costs of caesarean sections avoided, and is **A "BEST BUY" IN PRIMARY HEALTH CARE**.

- Investing in midwives frees doctors, nurses and other health cadres to focus on other health needs, and contributes to achieving a grand convergence: reducing infections, **ENDING PREVENTABLE MATERNAL MORTALITY** and **ENDING PREVENTABLE NEWBORN DEATHS**.

Midwifery2030: Quality midwifery care is central to achieving national and global priorities and securing the rights of women and newborns. SoWMy 2014 has developed *Midwifery2030* as a pathway for policy and planning. Starting from the premises that pregnant women are healthy unless complications, or signs thereof, occur, and that midwifery care provides preventive and supportive care with access to emergency care when needed, it promotes woman-centred and midwife-led models of care, which have been shown to generate greater benefits and cost savings than medicalized models of care.

Midwifery2030 focuses on increasing the availability, accessibility, acceptability and quality of health services and health providers to achieve the three components of universal health coverage (UHC): reaching a greater proportion of women of reproductive age (increasing coverage); extending the basic and essential health package (increasing services); while protecting against financial hardship (increasing financial protection). Central to this are an enabling policy environment that supports effective midwifery education, regulation and association development, and an enabling practice

MIDWIFERY2030: A PATHWAY TO HEALTH

PLANNING AND PREPARING *means:*

- delaying marriage
- completing secondary education
- providing comprehensive sexual education for boys and girls
- protecting yourself against HIV
- maintaining a good health and nutritional status
- planning pregnancies using modern contraceptive methods

ENSURING A HEALTHY START *means:*

- maintaining your health and preparing yourself for pregnancy, childbirth and the early months as a new family
- receiving at least four antenatal care visits, which include discussing birth preparedness and making an emergency plan
- demanding and receiving professional supportive and preventive midwifery care to help you and your baby stay healthy, and to deal with complications effectively, should they arise

WHAT MAKES THIS POSSIBLE?

1

All women of reproductive age, including adolescents, have universal access to midwifery care when needed.

2

Governments provide and are held accountable for a supportive policy environment.

3

Governments and health systems provide and are held accountable for a fully enabled environment.

4

Data collection and analysis are fully embedded in service delivery and development.

5

Midwifery care is prioritized in national health budgets; all women are given universal financial protection.

environment that provides access to effective consultation with and referral to the next level of SRMNH services. This should be underpinned by effective management of the workforce, including professional development and career pathways.

Implementing the recommendations of *Midwifery2030* can lead to significant returns on investment. A value for money assessment in Bangladesh reviewing the education and future deployment of 500 community-based midwives ranked positively for economy,

efficiency and effectiveness. The assessment calculated a beneficial impact comparable to that of child immunization, with a 16-fold return on investment and confirms that midwifery is a “best buy” in primary health care.

Essential building blocks for putting the *Midwifery2030* vision into practice include political will, effective leadership and midwifery “champions” who will drive the agenda, supported by the current regional and international momentum for improvements to SRMNH.

SUPPORTING A SAFE BEGINNING *means:*

- safely accessing midwifery services with the partner of your choice when labour starts
- finding respectful, supportive and preventive care, provided by competent midwives who have access to the equipment and supplies they need and receiving emergency obstetric care if required
- participating in decisions about how you and your baby are cared for
- having the privacy and space to experience birth without unnecessary disturbance and interventions
- being supported by a collaborative midwifery team in the event that you do need emergency obstetric care

CREATING A FOUNDATION FOR THE FUTURE *means:*

- starting to breastfeed immediately and being supported to continue breastfeeding as long as you wish
- being provided with information about and support in caring for your child in the first months and years of life
- receiving information about family planning so you can efficiently space your next pregnancy
- being supported by the midwifery team to access child and family health services and vaccination programmes at the appropriate time

6

Midwifery care is delivered in collaborative practice with health-care professionals, associates and lay health workers.

7

First-level midwifery care is close to the woman and her family with seamless transfer to next-level care.

8

The midwifery workforce is supported through quality education, regulation and effective human and other resource management.

9

All health-care professionals provide and are enabled for delivering respectful quality care.

10

Professional associations provide leadership to their members to facilitate quality care provision.
